

# SKYPE ROOM SYSTEMS

## Meetings. Made Simplier.

### Complete solutions - Video meetings for every room

The Skype Room System is a smart, elegant meeting room video solution designed in collaboration by Logitech and Microsoft.

Users can start meetings on time with one-touch join, then instantly project to the display in the room and share to remote participants via their Skype for Business clients on a smartphone or laptop. The system enables the user to share content in a meeting, and streamlines the overall collaboration experience.

This new technology delivers a clear and real-time audio and video experience, on a familiar interface which offers seamless integration with Office 365 calendars and contacts for a swift set up. See more at [www.collaborativemeetings.co.uk](http://www.collaborativemeetings.co.uk).
